

Diamond Doctor®

Ballpark Dust Control

Create a Healthier Environment On and Off the Field

Diamond Doctor - Synthetic Organic Dust Control® advanced environmental performance solution is a revolutionary, patent-pending ball park dust control agent manufactured by Midwest — a leader in dust control technology for over thirty years!

Diamond Doctor is specifically designed for baseball fields, outdoor venues and other areas where dust and environmental safety are a concern.

Diamond Doctor is colorless, odorless and non-toxic to humans, animals and plants - on land and in water. No other dust control technology in the world is as safe!

There is much concern today about naturally-occurring asbestos, which is released into the air through construction and recreational activities such as baseball fields, playgrounds, hiking and walking trails and dirt roads. Diamond Doctor can be used to help control dust emissions that contain naturally-occurring asbestos by preventing fibers from becoming airborne, reducing the risk of exposure.

Diamond Doctor Ballpark Dust Control

- *Eliminates watering*
- *Colorless*
- *Odorless*
- *Environmentally safe*
- *Easy to use, applied neat*
- *Eliminates loss of ballfield mix*
- *Addresses immediate health and safety concerns*
- *Allows for a "good neighbor" policy*

Application:

Diamond Doctor is applied neat and can be applied with most spray equipment. The ballfield is ready for immediate use.

The initial application is designed to treat and penetrate the area. Light subsequent applications are required every 2-3 months on an as-needed basis. Because Diamond Doctor has an accumulative effect, it is very easy to maintain control levels with one to two light maintenance applications a season.

Application Rate:

One tote effectively treats a 10,000 sq. ft. ballfield with the initial application, and one to two maintenance applications.

Availability:

Diamond Doctor is available in 55-gallon drums, manageable 275-gallon totes, bulk deliveries and delivered and applied by a Midwest Dust Control Application Specialist.

The world leader in environmentally sound, dust control technology

We are number one in introducing synthetic, organic dust-suppressant products formulated to meet strict environmental requirements. But being first isn't the only reason we are number one. We offer more than any other manufacturer in terms of solutions, documentation and support. When you choose our products, you'll know you're using the best.

For over 35 years, Midwest has improved customers' operational efficiency and operation costs while achieving environmental integrity and compliance in a variety of industries. With innovative, industry-leading products and application services, Midwest develops high-quality products for dust control, road stabilization, erosion control, soil stabilization and anti-icing/de-icing.

We have a group of dedicated, experienced professionals who are always ready to assist you with all of your dust control, erosion control and stabilization needs.
