**New Coal Bunker Seal System Prevents Combustion
Eliminates Spontaneous Combustion and Saves the Value of Coal**

CANTON, OHIO – December 2006 – Midwest Industrial introduces the Bunker Seal™, an air blocking system for plant coalbunkers, ensuring that no combustion will occur. When air is allowed to circulate through coal stocked in bunkers, spontaneous combustion can occur and be damaging to the value of the coal and especially dangerous to the power plant. The Bunker Seal consists of a manual spray nozzle and air powered pump mounted on a handcart that applies Soil-Sement®, a dust and erosion control chemical, used to seal the bunker top and keep air from circulating.

For over 30 years, Midwest Industrial Supply Inc. has been an industry leader in providing solutions for dust control, soil stabilization and erosion control that improves customers' operational efficiency and operation costs while achieving environmental integrity and compliance in a variety of industries.

For more information on the Bunker Seal™ Systems or other products from Midwest Industrial Supply, please call toll free 1-800-321-0699 or send an email to custserv@midwestind.com.
